

## VecTor2 Bundled Software Now Available

VecTor2 Version 3.5 – the most advanced version yet. A beta version of the full package is now available for [download](#). VecTor2 is a nonlinear finite element analysis package for the modeling of two-dimensional reinforced concrete structures and includes static and dynamic analysis capabilities. Recent advances include newly implemented modeling capabilities for steel-concrete composites, wood-concrete composites, laminate structures, masonry structures, and FRC structures, amongst others. The range of material and structural response models has also been expanded and the pre-processor (FormWorks) and post-processor (Augustus) have been improved. Download the full version now for free!
